

Marie Michael Library

Energy Meter Lending

In cooperation with Conserve Nova Scotia, the Marie Michael Library has an energy meter available for lending. The meter calculates the amount of power electrical appliances use. It can help you find out how much money it costs to run a freezer or how much “phantom power” is used by electronics that normally operate in standby mode.

Borrowing period is two weeks.

Information about this initiative is available on the Conserve NS website: <http://www.conservens.ca/meter>

From their website you can also download the instruction guide on how to use the meter to calculate your energy costs.
